

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

Claims 1-19 (Cancelled)

Claim 20 (new): A method for arranging engagement means in a concrete part, comprising the steps of: providing a body whose exterior comprises an elastomer material, with mechanical properties which are such that there is a considerable reduction in the external diameter at removal from the concrete; providing a formwork, arranging said body at the formwork surface, encasing said body in concrete material and removing it from the concrete after setting and removal of the formwork, said body being elongate and is removed from the concrete in its longitudinal direction and is provided with a projection which, at a distance from its end located at the boundary surface of the concrete, is positioned transversely with respect to the longitudinal direction and leaves behind a non-release recess in the concrete after setting, which recess comprises securing means for an engagement part which is then fitted into the concrete, wherein said body comprises a core, wherein said core is relatively rigid, comprises a supporting surface and is self-supporting and is secured to said formwork.

Claim 21 (new): The method as claimed in claim 20, wherein said projection comprises a continuous surface designed in such a manner that it is able to absorb both tensile and compressive forces.

Claim 22 (new): The method as claimed in claim 20, wherein said securing means comprise a screw thread-like recess in the concrete material and the engagement part is designed accordingly.

Claim 23 (new): The method as claimed in claim 20, wherein said securing means comprise a bayonet-like recess in the concrete material and the engagement part is embodied accordingly.

Claim 24 (new): The method as claimed in claim 20, in which said securing means are arranged on/in front of the said body, which securing means remain in the recess when said body is removed.

Claim 25 (new): The method as claimed in claim 20, wherein the said engagement part comprises hoisting means.

Claim 26 (new): The method as claimed in claim 25, comprising the step of providing a cavity which at both ends open out at the same boundary surface of the said concrete part, which cavity is U-shaped and is designed to receive a hoisting feature.

Claim 27 (new): The method as claimed in claim 20, wherein the said engagement part comprises an (adjustment) bolt.

Claim 28 (new): The method as claimed in claim 27, in which the said bolt comprises concrete material.

Claim 29 (new): The method as claimed in claim 20, wherein the said core, because of its shape and configuration, gives space to the wall thereof.

Claim 30 (new): The method as claimed in claim 20, wherein the said core is separated from the said elastomer material when the body is removed from the concrete.

Claim 31 (new): The method as claimed in claim 20, comprising the step of providing a series of bodies which are secured to a common carrier.

Claim 32 (new): The method according to claim 20, wherein a series of engagement surfaces is arranged in a concrete part, which extend from an outer wall thereof, comprising the steps of, placing a series of bodies into said formwork, wherein each cavity comprising a blind bore.

Claim 33 (new): The method as claimed in claim 20, wherein said securing means comprise a metal part which absorbs tensile and/or compressive forces and extends over the entire extent of the concrete part in the transverse direction.

Claim 34 (new): The method as claimed in claim 20, wherein said concrete part is moved to the building site after said recess has been put in place.

Claim 35 (new): The method as claimed in claim 20, wherein said body can be removed by hand.
